

smaltoxyl<sup>hydro</sup>

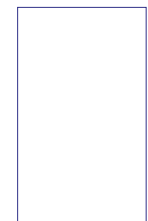

Wood is a timeless elegant choice as a construction or decorative material. It is a "living" material, a genuine part of nature in your space, and as such, it is extremely sensitive. It is porous, it "breathes", which means it can be easily altered and needs protection against light, water, temperature fluctuations, fungi and other wood diseases. VECHRO's leading Smaltoxyl Hydro protection system is the best choice! A complete range of water-soluble products that provide complete protection and renewal to exterior or interior wooden structures and cover the wide range of conditions surrounding them.

**The new Smaltoxyl Hydro packages** they are designed to make it easier for professional and private consumers to easily choose the right product, based on the type of wooden surface they want to work on and the protection they need. Each package is distinguished by its individual colour and name, clearly illustrating the indicative application areas and technical characteristics of each product.

We choose **VECHRO**, the leading company in total ecological paint Sales & Certifications since 2003!
